

RAVEN 500

Wireless High Decibel Alerting

Add the next layer of emergency mass notification for

- **Public Emergencies**
- **Severe Weather Warnings**

The RAVEN-500 is a high decibel warning system designed to deliver clear audible warnings indoors or outdoors. The emergency tones or optional voice commands are delivered to the unit by wireless messaging commonly known as paging. Messages can be initiated by local 911 dispatch, contract weather services, or onsite emergency personnel.

The RAVEN-500 can be used indoors or outdoors. It can be configured with multiple horns to accommodate 120 to 360 degree alerting. The unit is delivered fully assembled and mounts easily to any wall surface or utility type pole. Additional features such as strobe lights or digital message signs can be added for visual alerting.

The standard configuration uses the American Messaging paging technology and is factory programmed to use existing paging services in your geographic region. Activation can be accomplished from our user friendly software, existing software, or can even be done using a touch tone phone with specific secure activation codes.
