

Automate your web take out orders with the new RAVENAlert

When a new web take out order is received by your online ordering system, attention is brought to a backlit screen on the compact RAVENAlert by a flashing red LED light.

The RAVENAlert emits a loud tone followed by the order being displayed on the screen. Then the message is converted to speech! The order stays on the screen until the next order comes in.

KEY FEATURES:

- Easy set up process
- No "system" to install
- AC Power or 2D Batteries
- Compact size mounts to wall or sits on counter
- Affordable lease or purchase options

The RAVENAlert can easily be configured to drive a serial POS printer providing important printed backup to incoming order alerts.

The printer is connected via cable to the serial port of the RAVENAlert and will print the alphanumeric text immediately upon receipt of the order.

Standard "Rip and Run" configuration uses a POS-X XR210 (or like model) high speed impact receipt printer.

KEY FEATURES:

- Easy set up process
- Simultaneously receive and print messages
- Prints up to 480 characters in one message

Increase your employee efficiency and improve customer experience by automating your web take out orders with the affordable RAVENAlert
